Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission
Submitted (19-DEC-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA
On Mar 12, 2000 this sequence version replaced gi:6692332.
All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                             Center: Whitehead Institute/ MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        arbitrary. Gaps. between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center project name: 12667

Human DNA sequence from clone RP11-34D15 on chromosome 10, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORWPEP; Information on the WORWPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IMPORTANT: This sequence is not the entire insert of clone styl-13015 It may be shorter because we sequence overlapping sections only once, except for a short overlap.

The true right end of clone RP11-34D15 is at 115278 in this sequence. The true left end of clone RP11-285F16 is at 56886 in this sequence. The true right end of clone RP11-385F16 is at 56886 in this sequence. The true right end of clone RP11-316M21 is at 2000 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       http://www.sanger.ac.uk/HGP/Chr10
RP11-34D15 is from the library RPCI-11.1 constructed by the group
of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Euteleostomi;

It currently consists of 41 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. * 1497

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           variation annotation may not be tound in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Ems. EMBL; Sw.; database can be found at the feature table with their source databases: http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human continue forthous one 9 Mapping contraction or he hadden.
                                                                                                                                                                                                                                                                  AL157935 164201 bp DNA linear PRI 09-JAN-2002
Human DNA sequence from clone RP11-203J24 on chromosome 9, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission.

Submitted (09-JaN-2002) Wellcome Trust Sanger Institute, Hinxton, Submitted (09-JaN-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquiries: Hunxton, Nov 30, 2001 this sequence version replaced gi:16944853.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission variation annotation may not be found in the sequence submission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             constructed by the group

repeat_region repeat_region

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence than one subclone; and the assembly was confirmed by restriction digest

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis Mo. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa.K., Woon, P. Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J. J. and de Jong, P. J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pleter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
VECTOR: PBACe3:6

NEIGHBORING SEORENCE INFORMATION:
The clone sequenced to the left is RPI1-13J8; the clone sequenced to the right is RPI1-91MS. Actual start of this clone is at base position 1 of RRI1-469M7; actual end is at 190508 of RPI1-469M7. SOURCE INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention describes an isolated polypeptide segment (I) whose genes are fat regulated. (I) or the polynucleotide encoding it (II) are useful for diagnosing the presence of or a predisposition for a disorder involving fatty acid regulated genes in a subject. A composition containing (I) or (II) is useful for treating a disorder involving fatty acid regulated genes, where the disorder is selected from a polyunsaturated fatty acid (PUFA) disorder, eczema, cardiovascular disorders (such as hypertriglyceridaemia, dyslipidaemia, atherosclerosis, coronary artery disease, cerebrovascular disease or peripheral vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease), inflammation (such as sinusitis, asthma, pancreatitis, osteoarthritis, rheumatoid arthritis or acne), body weight disorders (such as obesity, cachexia or anorexia), psychiatric disorders, cancer, cystic fibrosis, pre-menstrual syndrome, diabetes, and diabetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ponton A;

complications. (I) or (II) is useful as research agent and materials for discovery of treatments and diagnostics for a disease, particularly human disease. (II) is useful for constructing nucleotide probes and primers, for detecting genetic polymorphism, for detecting changes in the level of expression of (II), and as a diagnostic tool. This sequence represents a control region from a gene encoding a fatty acid regulated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2360

The present sequence is that of the promoter region of the human stearcyl-CoA desaturase-1 (hSCD1) gene. The promoter structure is similar to that of the mouse SCD1 promoter and contains conserved regulatory sequences for the binding of several transcription factors. Like the mouse SCD1, the human SCD1 gene is regulated by polyunsaturated fatty acids and cholesterol at the level of gene transcription. The sterol regulatory element binding protein (SRBBP) plays a role in the sterol regulatory element binding protein (SRBBP) plays a role in the transcriptional activation of elements that modulate and control SCD1 expression in humans. The gene: The promoter can be used to identify regulatory proteins that are suitable targets for small molecule intervention to modulate expression of SCD1 in humans. The invention provides screening assays based on the role of hSCD1 in human diseases, disorders or conditions relating to serum levels of triglycenide, very low density lipoprotein, total cholesterol, or production of secretions from mucous membranes, monounsaturated fatty acids, wax esters, etc. Methods for diagnosing and treating such disorders using modulators of SCD1 activity are also provided. These disorders include various skin diseases and diverse maladies, ench is a carectory and multiple science and disperse maladies, ench is a careform and multiple science and disperse maladies, ench as careforms and an enchance and an enchance
Identifying an agent for treating disorders related to serum levels of fatty acids and glycerols, by contacting screening assay with delta-9 stearoyl-CoA desaturase activity with compound and measuring the

```

```
The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (CDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            17704 GIGGIGTCGGTGGCGCAGCATCCCCGGCGCCCTGCTGCGCTCGCCGCGAGCCTCGGCCT 17645

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (CDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid encoding novel connective tissue associated polypeptides, used in diagnosing, preventing, treating or ameliorating a disorder such as cancer or rheumatoid arthritis -
